LF Native Human Lactoferrin

| Catalog No. | CRL103A CRL103B | Quantity: | 1 mg 5 mg |
|-----------------------|--|-----------|--------------|
| Alternate Names: | hLF, LTF, growth-inhibiting protein 12, neutrophil lactoferrin, talalactoferrin | | |
| Description: | Human Lactoferrin plays an important role in iron transport and utilization in humans. A glycoprotein containing about 6% sugar, human lactoferrin is capable of binding two ferric ions with high affinity. Although lactoferrin binds iron tightly, the binding is reversible so that the metal is available upon demand to cells with a need for this essential element. Each human lactoferrin molecule has two iron-binding domains. Human Lactoferrin (hLF) is an iron-binding glycoprotein that facilitates the production of hydroxyl radicals and chelates iron, preventing its accessibility to microorganisms and thus inhibiting growth. Human Lactoferrin is found in secondary granules in polymorphonuclear neutrophils. Human Lactoferrin from human nuetrophil(s) lacks terminal fucose residues in the glycan chains that are required for binding to macrophages. | | |
| Protein Accession No: | Typically > 1mg/ml | | |
| Source: | Human Neutrophils | | |
| Molecular Weight: | 77 kDa | | |
| Formulation: | Liquid in .05M Sodium Acetate, pH 6.0 + 0.15 NaCl | | |
| Purity: | > 96% by SDS-PAGE | | |
| Storage & Stability: | Stable for one year at 2-4°C. | | |
| Contaminants: | No detectable MPO | | |

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
