CERTIFICATE OF ANALYSIS

Important Note: Centrifuge before opening to ensure complete recovery of vial contents.

Catalog #: 7600 **Lot #:** 19A01117

Description: CMV IgG/IgM Antigen, Conc.

Cytomegalovirus (CMV), (Strain AD169)

Source: MRC-5 Cells

Strain: AD169

Format: Lysate, Liquid

Purification: Infected MRC-5 cells are collected and put into Glycine buffered saline. Cells are disrupted to release cell

phase CMV antigen. Cellular debris is removed by centrifugation.

Concentration: 3.5 mg/mL (Biorad Dye Binding Assay)

Buffer: Glycine Buffered Saline, pH 9.5

Preservative: None

Applications: Sonicate immediately prior to use to ensure that the preparation is uniform. Suitable for use in CLIA,

Western Blot and ELISA. Suited for coating on solid phase for IgG and IgM detection. Each laboratory should determine an optimum working titer for use in its particular application. Other applications have not

been tested but use in such assays should not necessarily be excluded.

Storage: Upon receipt, store at -70°C to -100°C. Avoid multiple freeze/thaw cycles.

Inactivation: Inactivated using gamma radiation. Effectiveness is determined when no detection of growth in two blind

passages under the original culture conditions. Result: No growth detected.

Safety Note(s): Refer to the appropriate Safety Data Sheet (SDS) for additional information.
