

Synonym

CLEC12A, MICL, CLL-1, CLL1, DCAL2, DCAL-2, CD371

Source

Human CLEC12A, His Tag(CLA-H5245) is expressed from human 293 cells (HEK293). It contains AA His 65 - Ala 265 (Accession # [Q5QGZ9-2](#)).

Predicted N-terminus: His

Molecular Characterization

| | |
|----------|---------------------------------------|
| Poly-his | CLEC12A(His 65 - Ala 265) Q5QGZ9-2 |
|----------|---------------------------------------|

This protein carries a polyhistidine tag at the N-terminus.

The protein has a calculated MW of 25.6 kDa. The protein migrates as 35-55 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.

Endotoxin

Less than 1.0 EU per μ g by the LAL method / rFC method.

Purity

>90% as determined by SDS-PAGE.

Formulation

Lyophilized from 0.22 μ m filtered solution in PBS, pH7.4 with trehalose as protectant.

Contact us for customized product form or formulation.

Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

Storage

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

SDS-PAGE

Human CLEC12A, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90%.

Immobilized Human CLEC12A, His Tag (Cat. No. CLA-H5245) at 1 µg/mL (100 µL/well) can bind Monoclonal Anti-Human CLEC12A Antibody, Human IgG1 with a linear range of 0.1-4 ng/mL (QC tested).

Bioactivity-BLI

Loaded Monoclonal Anti-Human CLEC12A Antibody, Human IgG1 on Protein A Biosensor, can bind Human CLEC12A, His Tag (Cat. No. CLA-H5245) with an affinity constant of 131 nM as determined in BLI assay (ForteBio Octet R8) (Routinely tested).

Background

CLEC12A (C-type lectin domain family 12 member A) is also known as CLL1, DCAL2, MICL. Clec12a is an inhibitory receptor for uric acid crystals that regulates inflammation in response to cell death. Cell surface receptor that modulates signaling cascades and mediates tyrosine phosphorylation of target MAP kinases. Evidence of distinct disease propagating stem cells in myelodysplastic syndrome (MDS) has emerged in recent years. The role of CLEC12A in MDS, however, remains to be elucidated. Furthermore, CLEC12A has been proposed as a promising marker of leukaemic stem cells in AML.
