

**Synonym**

Glycan 1, GPC1

Source

Mouse Glycan 1, His Tag(GP1-M52H7) is expressed from human 293 cells (HEK293). It contains AA Asp 24 - Ser 529 (Accession # [Q9QZF2-1](#)).

Predicted N-terminus: Asp 24

Molecular Characterization

Glycan 1(Asp 24 - Ser 529)	Poly-his
Q9QZF2-1	

This protein carries a polyhistidine tag at the C-terminus.

The protein has a calculated MW of 57.5 kDa. The protein migrates as 60 kDa under reducing (R) condition (SDS-PAGE) due to glycosylation.

Endotoxin

Less than 1.0 EU per μ g by the LAL method / rFC method.

Purity

>90% as determined by SDS-PAGE.

Formulation

Lyophilized from 0.22 μ m filtered solution in 50 mM Tris, 150 mM NaCl, pH7.5 with trehalose as protectant.

Contact us for customized product form or formulation.

Reconstitution

Please see Certificate of Analysis for specific instructions.

For best performance, we strongly recommend you to follow the reconstitution protocol provided in the CoA.

Storage

For long term storage, the product should be stored at lyophilized state at -20°C or lower.

Please avoid repeated freeze-thaw cycles.

This product is stable after storage at:

- -20°C to -70°C for 12 months in lyophilized state;
- -70°C for 3 months under sterile conditions after reconstitution.

SDS-PAGE

Mouse Glycan 1, His Tag on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 90%.

Mouse Glycan 1 / GPC1 Protein, His Tag

Catalog # GP1-M52H7

BIOSYSTEMS
Acro
Surprise Inside!

Immobilized Human FGF basic, premium grade (Cat. No. BFF-H4117) at 1 µg/mL (100 µL/well) can bind Mouse Glycan 1, His Tag (Cat. No. GP1-M52H7) with a linear range of 5-78 ng/mL (QC tested).

Background

Glycan 1 has been shown to interact with SLIT2. This protein is involved in the misfolding of normal prion proteins in the cell membrane to the infectious prion form. Cell surface heparan sulfate proteoglycans are composed of a membrane-associated protein core substituted with a variable number of heparan sulfate chains. Members of the glycan-related integral membrane proteoglycan family (GRIPS) contain a core protein anchored to the cytoplasmic membrane via a glycosyl phosphatidylinositol linkage. These proteins may play a role in the control of cell division and growth regulation.
