

#### **Synonym**

Streptavidin, SA

#### Source

Streptavidin Protein-Acridinium ester (STN-NA114) is Acridinium ester chemically conjugated Streptavidin expressed from E. coli cells.

#### **Molecular Characterization**

Streptavidin carries no "tag". The protein has a calculated MW of 13.8 kDa. The protein migrates as 15-16 kDa when calibrated against <u>Star Ribbon Pre-stained</u> <u>Protein Marker</u> under reducing (R) condition (SDS-PAGE).

The protein is designed as a tetramer.

### Labeling

Acridinium ester, can react with the primary amino group of protein. Under alkaline conditions, NHS is replaced as the leaving group, and the protein forms a stable amide bond with Acridinium ester.

#### **Protein Ratio**

Passed as determined by binding MPCLIA.

### **Purity**

>95% as determined by SDS-PAGE.

>90% as determined by SEC-MALS.

#### Formulation

## SDS-PAGE

Streptavidin Protein-Acridinium ester on SDS-PAGE under reducing (R) condition. The gel was stained with Coomassie Blue. The purity of the protein is greater than 95% (With <u>Star Ribbon Pre-stained Protein Marker</u>).

#### **SEC-MALS**

The purity of Streptavidin Protein-Acridinium ester (Cat. No. STN-NA114) is more than 90% and the molecular weight of this protein is around 55-75 kDa verified by SEC-MALS.

## Background

Streptavidin is a tetrameric protein purified from the bacterium Streptomyces avidinii, and exhibits high binding affinity for biotin. Able to bind one molecule of biotin with each subunit. Streptavidin (PI=6.0-7.5) has lower level of non-specific binding to various biological components at physiological pH than avidin (PI=7.4), resulting from its isoelectric point (PI). Streptavidin is useful in affinity chromatography, ELISA, immunohistochemistry and Western Blotting.
