Histone-Lysine N-Methyltransferase EZH2 (EZH2) Antibody

Catalogue No.: abx025197

This gene encodes a member of the Polycomb-group (PcG) family. PcG family members form multimeric protein complexes, which are involved in maintaining the transcriptional repressive state of genes over successive cell generations. This protein associates with the embryonic ectoderm development protein, the VAV1 oncoprotein, and the X-linked nuclear protein. This protein may play a role in the hematopoietic and central nervous systems. Two transcript variants encoding distinct isoforms have been identified for this gene.

Recommended dilutions: Optimal dilutions/concentrations should be determined by the end user.

Immunogen: Human EZH2.

Purification: Purified Mouse Monoclonal Antibody.

Isotype: IgG₁κ

Conjugation: Unconjugated

Specificity: This EZH2 antibody is generated from mouse immunized with EZH2 recombinant protein.

Storage: Aliquot and store at -20 °C. Avoid repeated freeze/thaw cycles.

Swiss Prot: [Q15910](#)

Buffer: PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein G column, eluted with high and low pH buffers and neutralized immediately, followed by dialysis against PBS.

Note: This product is for research use only.
