Up RNA Extraction Kit

Catalogue No.: abx098087

Up RNA extraction Kit is a ready-to-use reagent for the isolation of total RNA from cells and tissues. Up RNA extraction Kit permits the integrity of RNA, while disrupting cells. The addition of chloroform to the sample, followed by centrifugation separates the solution into an upper colorless aqueous phase containing RNA and a lower pink organic phase. RNA is precipitated and recovered with isopropanol. Proteins can be recovered from organic phase with isopropanol. Up RNA extraction Kit provides powerful lysis capability, rapid extraction procedure, increased RNA extraction quantity and higher purity.

Target: RNA

Storage: Store at 4 °C in the dark. Stable for 12 months from date of receipt.

Note: This product is for research use only.
