Ni-IDA Resin

Catalogue No.: abx098109

Ni-IDA Resin is used for one-step purification of His-tagged proteins. The His-tagged proteins bind to Ni²⁺ cations, which are immobilized on the Ni-IDA resin by 3 metal-chelating sites. After unbound proteins are washed away, the target proteins are recovered by gradient elution. It is suitable for both native and denatured protein purification.

Target: Ni-IDA Resin

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
