Mammalian Membrane Protein Extraction Kit

Catalogue No.: abx098855

Mammalian Membrane Extraction Kit provides a simple and efficient way to isolate and extract membrane protein from mammalian cells and tissues. Native proteins can be obtained within 70 minutes without the ultracentrifugation. Up to 90% efficiency for membrane proteins with at least 1-2 transmembrane domains. The extracted protein is suitable for a variety of downstream applications, including SDS-PAGE, Western Blot, ELISA, and enzyme-activity assays.

Target: Mammalian Membrane Protein

Storage: Store at -20°C. Stable for 12 months from date of receipt.

Note: This product is for research use only.
