Human Myeloperoxidase (MPO) ELISA Kit

Catalogue No.: abx152416

Human Myeloperoxidase ELISA Kit is a sandwich ELISA kit for use with Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids. This assay has high sensitivity and excellent specificity for detection of Myeloperoxidase (MPO)

No significant cross-reactivity or interference between Myeloperoxidase (MPO) and analogues was observed.

Please note that this kit is also available as a CLIA Kit [abx190125](#).

Target:	Myeloperoxidase
Reactivity:	Human
Tested Applications:	ELISA
Recommended dilutions:	Optimal dilutions/concentrations should be determined by the end user.
Test Range:	1.56 ng/ml - 100 ng/ml
Sensitivity:	< 0.65 ng/ml
Validity:	The validity for this kit is 6 months.
Storage:	Store at 2°C to 8°C upon receipt.
Stability:	The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5% within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout.
Swiss Prot:	P05164
GeneID:	4353

Gene Symbol: MPO

OMIM: [254600](#)

Enzyme Commission Number: EC 1.11.2.2

HGNC: 7218

Ensembl: ENSG00000005381

Standard Form: Lyophilized

ELISA Detection: Colorimetric

ELISA Type: Sandwich

ELISA Data: Quantitative

Sample Type: Serum, plasma, tissue homogenates, cell lysates, cell culture supernatants and other biological fluids.

Note: This product is for research use only.
The range and sensitivity is subject to change. Please contact us for the latest product information. For accurate results, sample concentrations must be diluted to mid-range of the kit. If you require a specific range, please contact us in advance or write your request in your order comments.
Please note that our ELISA and CLIA kits are optimised for detection of native samples, rather than recombinant proteins. We are unable to guarantee detection of recombinant proteins, as they may have different sequences or tertiary structures to the native protein.
