GAD2 Antibody - Background

This gene encodes one of several forms of
glutamic acid
decarboxylase, identified as a major
autoantigen in
insulin-dependent diabetes. The enzyme
encoded is responsible for
catalyzing the production of
gamma-aminobutyric acid from
L-glutamic acid. A pathogenic role for this
enzyme has been
identified in the human pancreas since it has
been identified as an
autoantibody and an autoreactive T cell target
in insulin-dependent
diabetes. This gene may also play a role in the
stiff man syndrome.
Alternative splicing results in multiple
transcript variants that
encode the same protein.
