

CXADR Antibody (Center)
Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP2852c

Specification

CXADR Antibody (Center) - Product Information

Application	WB, FC,E
Primary Accession	P78310
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	Rabbit Ig
Calculated MW	40030
Antigen Region	132-161

CXADR Antibody (Center) - Additional Information

Gene ID 1525

Other Names

Coxsackievirus and adenovirus receptor,
CAR, hCAR, CVB3-binding protein,
Coxsackievirus B-adenovirus receptor,
HCVADR, CXADR, CAR

Target/Specificity

This CXADR antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 132-161 amino acids from the Central region of human CXADR.

Dilution

WB~~1:1000
FC~~1:10~50

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

CXADR Antibody (Center) is for research

Western blot analysis of anti-CXADR Antibody (Center) (Cat.#AP2852c) in NCI-H460 cell line lysates (35ug/lane). CXADR(arrow) was detected using the purified Pab.

Flow cytometric analysis of NCI-H460 cells using CXADR Antibody (Center) (bottom histogram) compared to a negative control cell (top histogram). FITC-conjugated goat-anti-rabbit secondary antibodies were used for the analysis.

CXADR Antibody (Center) - Background

CXADR is a type I membrane receptor for group B coxsackieviruses and subgroup C adenoviruses.

use only and not for use in diagnostic or therapeutic procedures.

CXADR Antibody (Center) - Protein Information

Name CXADR

Synonyms CAR

Function

Component of the epithelial apical junction complex that may function as a homophilic cell adhesion molecule and is essential for tight junction integrity. Also involved in transepithelial migration of leukocytes through adhesive interactions with JAML a transmembrane protein of the plasma membrane of leukocytes. The interaction between both receptors also mediates the activation of gamma-delta T-cells, a subpopulation of T-cells residing in epithelia and involved in tissue homeostasis and repair. Upon epithelial CXADR-binding, JAML induces downstream cell signaling events in gamma-delta T-cells through PI3- kinase and MAP kinases. It results in proliferation and production of cytokines and growth factors by T-cells that in turn stimulate epithelial tissues repair.

Cellular Location

[Isoform 1]: Cell membrane; Single-pass type I membrane protein. Basolateral cell membrane; Single-pass type I membrane protein. Cell junction, tight junction. Cell junction, adherens junction. Note=In epithelial cells localizes to the apical junction complex composed of tight and adherens junctions (PubMed:12297051). In airway epithelial cells localized to basolateral membrane but not to apical surface (PubMed:11316797). [Isoform 4]: Secreted

Tissue Location

Expressed in pancreas, brain, heart, small intestine, testis, prostate and at a lower level in liver and lung Isoform 5 is ubiquitously expressed. Isoform 3 is expressed in heart, lung and pancreas. In skeletal muscle, isoform 1 is found at the neuromuscular junction and isoform 2 is found in blood vessels. In cardiac muscle, isoform 1 and isoform 2 are found at intercalated disks. In heart expressed in subendothelial layers of the vessel wall but
