

## **MLLT3 Antibody (N-term H54)**

Purified Rabbit Polyclonal Antibody (Pab)
Catalog # AP6190c

#### **Specification**

## MLLT3 Antibody (N-term H54) - Product Information

Application WB,E **Primary Accession** P42568 Other Accession A2AM29 Reactivity Human Predicted Mouse Host Rabbit Clonality **Polyclonal** Isotype Rabbit Ig Calculated MW 63351 **Antigen Region** 39-65

MLLT3 Antibody (N-term H54) - Additional Information

#### Gene ID 4300

#### **Other Names**

Protein AF-9, ALL1-fused gene from chromosome 9 protein, Myeloid/lymphoid or mixed-lineage leukemia translocated to chromosome 3 protein, YEATS domain-containing protein 3, MLLT3, AF9, YEATS3

### **Target/Specificity**

This MLLT3 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 39-65 amino acids from the N-terminal region of human MLLT3.

#### **Dilution**

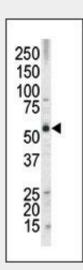

WB~~1:1000

#### **Format**

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation followed by dialysis against PBS.

## Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C

The anti-MLLT3 Pab (Cat. #AP6190c) is used in Western blot to detect MLLT3 in HL60 tissue lysate

# MLLT3 Antibody (N-term H54) - Background

The human AF9 gene is one of the most common fusion partner genes with the ALL1 gene at 11q23 (also called MLL), resulting in the t(9;11)(p22;q23). The AF9 gene is more than 100 kb, and 2 patient breakpoint cluster regions (BCRs) have been identified; BCR1 is within intron 4, previously called site A, whereas BCR2 or site B spans introns 7 and 8. Several different structural elements have been identified in AF9, including a colocalizing in vivo DNA topo II cleavage site and an in vitro DNase I hypersensitive (DNase 1 HS) site in intron 7 in BCR2. Reversibility experiments demonstrated a religation of the topo II cleavage sites. In addition, 2 scaffold associated regions (SARs) are located centromeric to the topo II and DNase I HS cleavage sites and border breakpoint regions in 2 leukemic cells lines: SAR1 is located in intron 4, whereas SAR2 encompasses parts of exons 5-7. The patient breakpoint regions of AF9 share the same structural elements as the

in small aliquots to prevent freeze-thaw cycles.

#### **Precautions**

MLLT3 Antibody (N-term H54) is for research use only and not for use in diagnostic or therapeutic procedures.

MLLT3 Antibody (N-term H54) - Protein Information

Name MLLT3

{ECO:0000303|PubMed:16001262, ECO:0000312|HGNC:HGNC:7136}

#### **Function**

Chromatin reader component of the super elongation complex (SEC), a complex required to increase the catalytic rate of RNA polymerase II transcription by suppressing transient pausing by the polymerase at multiple sites along the DNA (PubMed:<a href="http://www.uniprot.org/citations/20159561"

target=" blank">20159561</a>,

PubMed: <a href="http://www.uniprot.org/ci tations/20471948"

target=" blank">20471948</a>,

PubMed: <a href="http://www.uniprot.org/ci tations/25417107"

target="\_blank">25417107</a>,

PubMed:<a href="http://www.uniprot.org/ci tations/27105114"

target=" blank">27105114</a>,

PubMed: <a href="http://www.uniprot.org/ci tations/27545619"

target=" blank">27545619</a>).

Specifically recognizes and binds acylated histone H3, with a preference for histone H3 that is crotonylated (PubMed:<a href="http://www.uniprot.org/citations/25417107"

target=" blank">25417107</a>,

PubMed:<a href="http://www.uniprot.org/ci tations/27105114"

target="\_blank">27105114</a>,

PubMed:<a href="http://www.uniprot.org/ci tations/27545619"

PubMed:<a href="http://www.uniprot.org/ci tations/30374167"

target="\_blank">30374167</a>,

PubMed:~a href="http://www.uniprot.org/ci

tations/30385749"

target=" blank">30385749</a>).

Crotonylation marks active promoters and enhancers and confers resistance to

MLL BCR. A DNA breakage and repair model for nonhomologous recombination between MLL and its partner genes, particularly AF9, has been proposed.

## MLLT3 Antibody (N-term H54) - References

transcriptional repressors (PubMed:<a href ="http://www.uniprot.org/citations/2541710 7" target="\_blank">25417107</a>, PubMed:<a href="http://www.uniprot.org/ci tations/27105114" target=" blank">27105114</a>, PubMed:<a href="http://www.uniprot.org/ci tations/27545619" target=" blank">27545619</a>). Recognizes and binds histone H3 crotonylated at 'Lys-9' (H3K9cr), and with slightly lower affinity histone H3 crotonylated at 'Lys-18' (H3K18cr) (PubMed:<a href="http://www.uniprot.org/c itations/27105114" target=" blank">27105114</a>). Also recognizes and binds histone H3 acetylated and butyrylated at 'Lys-9' (H3K9ac and H3K9bu, respectively), but with lower affinity than crotonylated histone H3 (PubMed:<a href="http://www.uniprot.org/c itations/25417107" target=" blank">25417107</a>, PubMed:<a href="http://www.uniprot.org/ci tations/27105114" target=" blank">27105114</a>, PubMed:<a href="http://www.uniprot.org/ci tations/30385749" target=" blank">30385749</a>). In the SEC complex, MLLT3 is required to recruit the complex to crotonylated histones (PubMed:<a href="http://www.uniprot.org/c itations/27105114" target=" blank">27105114</a>, PubMed:<a href="http://www.uniprot.org/ci tations/27545619" target=" blank">27545619</a>). Recruitment of the SEC complex to crotonylated histones promotes recruitment of DOT1L on active chromatin to deposit histone H3 'Lys-79' methylation (H3K79me) (PubMed:<a href="http://www.uniprot.org/c itations/25417107" target=" blank">25417107</a>). Plays a key role in hematopoietic stem cell (HSC) maintenance by preserving, rather than confering, HSC stemness (PubMed:<a href= "http://www.uniprot.org/citations/31776511 " target=" blank">31776511</a>). Acts by binding to the transcription start site of active genes in HSCs and sustaining level of H3K79me2, probably by recruiting DOT1L (PubMed:<a href="http://www.uniprot.org/c itations/31776511" target=" blank">31776511</a>).

**Cellular Location** 

**Nucleus** 

{ECO:0000255|PROSITE-ProRule:PRU00376, ECO:0000269|PubMed:27105114}. Chromosome. Note=Colocalizes with acylated histone H3 (PubMed:25417107, PubMed:27105114). Colocalizes with histone H3 crotonylated at 'Lys-18' (H3K18cr) (PubMed:27105114)

### **Tissue Location**

Enriched in undifferentiated hematopoietic stem cells in fetal liver, cord blood and bone marrow

## MLLT3 Antibody (N-term H54) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- <u>Immunofluorescence</u>
- Immunoprecipitation
- Flow Cytomety
- Cell Culture
