

## STAT3 Antibody (C-term S727) Blocking Peptide

Synthetic peptide Catalog # BP18086b

## **Specification**

STAT3 Antibody (C-term S727) Blocking Peptide - Product Information

Primary Accession <u>P40763</u>

STAT3 Antibody (C-term S727) Blocking Peptide - Additional Information

### **Gene ID 6774**

### **Other Names**

Signal transducer and activator of transcription 3, Acute-phase response factor, STAT3, APRF

#### **Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

## **Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

#### **Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

STAT3 Antibody (C-term S727) Blocking Peptide - Protein Information

Name STAT3 (HGNC:11364)

### **Function**

Signal transducer and transcription activator that mediates cellular responses to interleukins, KITLG/SCF, LEP and other growth factors (PubMed:<a href="http://www.uniprot.org/citations/10688651" target="\_blank">10688651" target="\_blank">10688651</a>, PubMed:<a href="http://www.uniprot.org/citations/12359225" target=" blank">12359225</a>,

# STAT3 Antibody (C-term S727) Blocking Peptide - Background

The protein encoded by this gene is a member of the STAT protein family. In response to cytokines and growth factors, STATfamily members are phosphorylated by the receptor associatedkinases, and then form homo- or heterodimers that translocate tothe cell nucleus where they act as transcription activators. Thisprotein is activated through phosphorylation in response to variouscytokines and growth factors including IFNs, EGF, IL5, IL6, HGF, LIF and BMP2. This protein mediates the expression of a variety ofgenes in response to cell stimuli, and thus plays a key role inmany cellular processes such as cell growth and apoptosis. The small GTPase Rac1 has been shown to bind and regulate the activity of this protein. PIAS3 protein is a specific inhibitor of thisprotein. Three alternatively spliced transcript variants encodingdistinct isoforms have been described.

PubMed:<a href="http://www.uniprot.org/ci

tations/18242580"

target=" blank">18242580</a>,

PubMed:<a href="http://www.uniprot.org/ci

tations/23084476"

target="\_blank">23084476</a>). Once

activated, recruits coactivators, such as

NCOA1 or MED1, to the promoter region of the target gene (PubMed:<a href="http://w"

ww.uniprot.org/citations/17344214"

target="\_blank">17344214</a>). May

mediate cellular responses to activated

FGFR1, FGFR2, FGFR3 and FGFR4

(PubMed:<a href="http://www.uniprot.org/c

itations/12873986"

target="\_blank">12873986</a>). Upon activation of IL6ST/gp130 signaling by

interleukin-6 (IL6), binds to the

IL6-responsive elements identified in the promoters of various acute-phase protein genes (PubMed:<a href="http://www.unipro">http://www.unipro</a>

t.org/citations/12359225"

target=" blank">12359225</a>).

Activated by IL31 through IL31RA

(PubMed:<a href="http://www.uniprot.org/c

itations/15194700"

target="\_blank">15194700</a>). Acts as a regulator of inflammatory response by

regulating differentiation of naive CD4(+)

T-cells into T-helper Th17 or regulatory

T-cells (Treg): deacetylation and oxidation of lysine residues by LOXL3, leads to disrupt

STAT3 dimerization and inhibit its

transcription activity (PubMed:<a href="htt

p://www.uniprot.org/citations/28065600"

target="\_blank">28065600</a>). Involved in cell cycle regulation by inducing the

expression of key genes for the progression

from G1 to S phase, such as CCND1
(PubMed: <a href="http://www.uniprot.org/c">
(PubMed: <a href="http://www.uni

(PubMed:<a href="http://www.uniprot.org/c itations/17344214"

target="\_blank">17344214</a>). Mediates

the effects of LEP on melanocortin production, body energy homeostasis and

lactation (By similarity). May play an

apoptotic role by transctivating BIRC5 expression under LEP activation

(PubMed:<a href="http://www.uniprot.org/c

itations/18242580" target="\_blank">18242580</a>). Cytoplasmic STAT3 represses macroautophagy by inhibiting EIF2AK2/PKR activity (PubMed:<a href="http://www.uniprot.org/citations/23084476" target="\_blank">23084476</a>). Plays a crucial role in basal beta cell functions, such as regulation of insulin secretion (By similarity).

### **Cellular Location**

Cytoplasm. Nucleus. Note=Shuttles between the nucleus and the cytoplasm. Translocated into the nucleus upon tyrosine phosphorylation and dimerization, in response to signaling by activated FGFR1, FGFR2, FGFR3 or FGFR4. Constitutive nuclear presence is independent of tyrosine phosphorylation. Predominantly present in the cytoplasm without stimuli. Upon leukemia inhibitory factor (LIF) stimulation, accumulates in the nucleus. The complex composed of BART and ARL2 plays an important role in the nuclear translocation and retention of STAT3 Identified in a complex with LYN and PAG1

#### **Tissue Location**

Heart, brain, placenta, lung, liver, skeletal muscle, kidney and pancreas. Expressed in naive CD4(+) T cells as well as T-helper Th17, Th1 and Th2 cells (PubMed:31899195)
