

GYG2 Antibody (C-term) Blocking Peptide
Synthetic peptide
Catalog # BP18439b**Specification****GYG2 Antibody (C-term) Blocking Peptide -
Product Information**Primary Accession [O15488](#)**GYG2 Antibody (C-term) Blocking Peptide -
Additional Information****Gene ID 8908****Other Names**

Glycogenin-2, GN-2, GN2, GYG2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**GYG2 Antibody (C-term) Blocking Peptide -
Protein Information****Name GYG2****Function**

Self-glucosylates, via an inter-subunit mechanism, to form an oligosaccharide primer that serves as substrate for glycogen synthase.

Tissue Location

Detected in liver (at protein level) (PubMed:9857012). Expressed preferentially in liver, heart, and pancreas (PubMed:9346895).

**GYG2 Antibody (C-term) Blocking Peptide
- Background**

This gene encodes a member of the the glycogenin family. Glycogenin is a self-glucosylating protein involved in the initiation reactions of glycogen biosynthesis. A gene on chromosome 3 encodes the muscle glycogenin and this X-linked gene encodes the glycogenin mainly present in liver; both are involved in blood glucose homeostasis. This gene has a short version on chromosome Y, which is 3' truncated and can not make a functional protein. Multiple alternatively spliced transcript variants encoding different isoforms have been identified.
