

CCNB2 Blocking Peptide (N-term S22)
Synthetic peptide
Catalog # BP20021a**Specification****CCNB2 Blocking Peptide (N-term S22) - Product Information**

Primary Accession [O95067](#)
Other Accession [NP_004692.1](#)

CCNB2 Blocking Peptide (N-term S22) - Additional Information

Gene ID 9133

Other Names

G2/mitotic-specific cyclin-B2, CCNB2

Target/Specificity

The synthetic peptide sequence is selected from aa 15-29 of HUMAN CCNB2

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

CCNB2 Blocking Peptide (N-term S22) - Protein Information

Name CCNB2

Function

Essential for the control of the cell cycle at the G2/M (mitosis) transition.

CCNB2 Blocking Peptide (N-term S22) - Background

Cyclin B2 is a member of the cyclin family, specifically the B-type cyclins. The B-type cyclins, B1 and B2, associate with p34cdc2 and are essential components of the cell cycle regulatory machinery. B1 and B2 differ in their subcellular localization. Cyclin B1 co-localizes with microtubules, whereas cyclin B2 is primarily associated with the Golgi region. Cyclin B2 also binds to transforming growth factor beta RII and thus cyclin B2/cdc2 may play a key role in transforming growth factor beta-mediated cell cycle control.
