

**ADAM9 Antibody (C-term) Blocking Peptide**  
**Synthetic peptide**  
**Catalog # BP7437b****Specification****ADAM9 Antibody (C-term) Blocking Peptide -  
Product Information**Primary Accession [Q13443](#)**ADAM9 Antibody (C-term) Blocking Peptide -  
Additional Information****Gene ID** 8754**Other Names**

Disintegrin and metalloproteinase domain-containing protein 9, ADAM 9, 3424-, Cellular disintegrin-related protein, Meltrin-gamma, Metalloprotease/disintegrin/cysteine-rich protein 9, Myeloma cell metalloproteinase, ADAM9, KIAA0021, MCMP, MDC9, MLTNG

**Target/Specificity**

The synthetic peptide sequence used to generate the antibody <a href="/products/AP7437b">AP7437b</a> was selected from the C-term region of human ADAM9. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

**Format**

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

**Storage**

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

**Precautions**

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**ADAM9 Antibody (C-term) Blocking Peptide -****ADAM9 Antibody (C-term) Blocking Peptide - Background**

ADAM9 is a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. This protein interacts with SH3 domain-containing proteins, binds mitotic arrest deficient 2 beta protein, and is also involved in TPA-induced ectodomain shedding of membrane-anchored heparin-binding EGF-like growth factor.

**Protein Information****Name** ADAM9**Synonyms** KIAA0021, MCMP, MDC9, MLTNG**Function**

Cleaves and releases a number of molecules with important roles in tumorigenesis and angiogenesis, such as TEK, KDR, EPHB4, CD40, VCAM1 and CDH5. May mediate cell-cell, cell-matrix interactions and regulate the motility of cells via interactions with integrins.

**Cellular Location**

[Isoform 1]: Cell membrane; Single-pass type I membrane protein

**Tissue Location**

Widely expressed. Expressed in chondrocytes. Isoform 2 is highly expressed in liver and heart

**ADAM9 Antibody (C-term) Blocking Peptide - Protocols**

Provided below are standard protocols that you may find useful for product applications.
