

EGFR Antibody (Y1110) Blocking Peptide
Synthetic peptide
Catalog # BP7628m**Specification****EGFR Antibody (Y1110) Blocking Peptide -
Product Information**Primary Accession [P00533](#)**EGFR Antibody (Y1110) Blocking Peptide -
Additional Information**

Gene ID 1956

Other NamesEpidermal growth factor receptor,
Proto-oncogene c-ErbB-1, Receptor
tyrosine-protein kinase erbB-1, EGFR, ERBB,
ERBB1, HER1**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP7628m](/product/products/AP7628m) was selected from the Y1110 region of human EGFR. A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**EGFR Antibody (Y1110) Blocking Peptide -
Protein Information**Name EGFR ([HGNC:3236](#))**EGFR Antibody (Y1110) Blocking Peptide -
Background**

The epidermal growth factor receptor is the cell-surface receptor for members of the epidermal growth factor family (EGF-family) of extracellular protein ligands. The epidermal growth factor receptor is a member of the ErbB family of receptors, a subfamily of four closely related receptor tyrosine kinases: EGFR (ErbB-1), HER2/c-neu (ErbB-2), Her 3 (ErbB-3) and Her 4 (ErbB-4). Mutations affecting EGFR expression or activity could result in cancer.

Synonyms ERBB, ERBB1, HER1**Function**

Receptor tyrosine kinase binding ligands of the EGF family and activating several signaling cascades to convert extracellular cues into appropriate cellular responses (PubMed: [2790960](http://www.uniprot.org/citations/2790960)), (PubMed: [10805725](http://www.uniprot.org/citations/10805725)), (PubMed: [27153536](http://www.uniprot.org/citations/27153536)). Known ligands include EGF, TGFA/TGF-alpha, AREG, epigen/EPGN, BTC/betacellulin, epiregulin/EREG and HBEGF/heparin-binding EGF (PubMed: [2790960](http://www.uniprot.org/citations/2790960)), (PubMed: [7679104](http://www.uniprot.org/citations/7679104)), (PubMed: [8144591](http://www.uniprot.org/citations/8144591)), (PubMed: [9419975](http://www.uniprot.org/citations/9419975)), (PubMed: [15611079](http://www.uniprot.org/citations/15611079)), (PubMed: [12297049](http://www.uniprot.org/citations/12297049)), (PubMed: [27153536](http://www.uniprot.org/citations/27153536)), (PubMed: [20837704](http://www.uniprot.org/citations/20837704)), (PubMed: [17909029](http://www.uniprot.org/citations/17909029)). Ligand binding triggers receptor homo- and/or heterodimerization and autophosphorylation on key cytoplasmic residues. The phosphorylated receptor recruits adapter proteins like GRB2 which in turn activates complex downstream signaling cascades. Activates at least 4 major downstream signaling cascades including the RAS-RAF-MEK-ERK, PI3 kinase-AKT, PLCgamma-PKC and STATs modules (PubMed: [27153536](http://www.uniprot.org/citations/27153536)).

prot.org/citations/27153536" target="_blank">27153536). May also activate the NF-kappa-B signaling cascade (PubMed:11116146). Also directly phosphorylates other proteins like RGS16, activating its GTPase activity and probably coupling the EGF receptor signaling to the G protein-coupled receptor signaling (PubMed:11602604). Also phosphorylates MUC1 and increases its interaction with SRC and CTNNB1/beta-catenin (PubMed:11483589). Positively regulates cell migration via interaction with CCDC88A/GIV which retains EGFR at the cell membrane following ligand stimulation, promoting EGFR signaling which triggers cell migration (PubMed:20462955). Plays a role in enhancing learning and memory performance (By similarity).

Cellular Location

Cell membrane; Single-pass type I membrane protein. Endoplasmic reticulum membrane; Single-pass type I membrane protein. Golgi apparatus membrane; Single-pass type I membrane protein. Nucleus membrane; Single-pass type I membrane protein Endosome Endosome membrane. Nucleus. Note=In response to EGF, translocated from the cell membrane to the nucleus via Golgi and ER (PubMed:20674546, PubMed:17909029). Endocytosed upon activation by ligand (PubMed:2790960, PubMed:17182860, PubMed:27153536, PubMed:17909029). Colocalized with GPER1 in the nucleus of estrogen agonist-induced cancer-associated fibroblasts (CAF) (PubMed:20551055)

Tissue Location

Ubiquitously expressed. Isoform 2 is also expressed in ovarian cancers.

EGFR Antibody (Y1110) Blocking Peptide - Protocols

Provided below are standard protocols that you may find useful for product applications.
