

ROR1 Antibody (N-term) Blocking Peptide
Synthetic peptide
Catalog # BP7671a**Specification****ROR1 Antibody (N-term) Blocking Peptide -
Product Information**Primary Accession [Q01973](#)**ROR1 Antibody (N-term) Blocking Peptide -
Additional Information****Gene ID** 4919**Other Names**Tyrosine-protein kinase transmembrane
receptor ROR1, Neurotrophic tyrosine
kinase, receptor-related 1, ROR1, NTRKR1**Target/Specificity**

The synthetic peptide sequence used to generate the antibody [AP7671a](/product/products/AP7671a) was selected from the N-term region of human ROR1 . A 10 to 100 fold molar excess to antibody is recommended. Precise conditions should be optimized for a particular assay.

Format

Peptides are lyophilized in a solid powder format. Peptides can be reconstituted in solution using the appropriate buffer as needed.

Storage

Maintain refrigerated at 2-8°C for up to 6 months. For long term storage store at -20°C.

Precautions

This product is for research use only. Not for use in diagnostic or therapeutic procedures.

**ROR1 Antibody (N-term) Blocking Peptide -
Protein Information****Name** ROR1**ROR1 Antibody (N-term) Blocking Peptide
- Background**

ROR1 is a receptor protein tyrosine kinase whose cellular role has not been determined. It is a type I membrane protein and belongs to the ROR subfamily of cell surface receptors. Studies of a similar protein in mouse suggest that this protein may interact with another receptor protein tyrosine kinase and may be involved in skeletal and cardiac development.

Synonyms NTRKR1**Function**

Has very low kinase activity in vitro and is unlikely to function as a tyrosine kinase in vivo (PubMed:25029443). Receptor for ligand WNT5A which activate downstream NFkB signaling pathway and may result in the inhibition of WNT3A-mediated signaling (PubMed:25029443, PubMed:27162350). In inner ear, crucial for spiral ganglion neurons to innervate auditory hair cells (PubMed:27162350).

Cellular Location

Membrane; Single- pass type I membrane protein. Cell projection, axon
{ECO:0000250|UniProtKB:Q9Z139}

Tissue Location

Expressed strongly in human heart, lung and kidney, but weakly in the CNS. Isoform Short is strongly expressed in fetal and adult CNS and in a variety of human cancers, including those originating from CNS or PNS neuroectoderm
