

DPF3 Antibody (Center)

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP5430C

Specification

DPF3 Antibody (Center) - Product Information

Application WB,E
Primary Accession Q92784

Other Accession <u>P58270</u>, <u>NP 036206.3</u>

Reactivity
Predicted
Chicken
Host
Clonality
Polyclonal
Isotype
Calculated MW
Antigen Region

Human
Chicken
Rabbit
Polyclonal
Rabbit IgG
A3084
A13171

DPF3 Antibody (Center) - Additional Information

Gene ID 8110

Other Names

Zinc finger protein DPF3, BRG1-associated factor 45C, BAF45C, Zinc finger protein cer-d4, DPF3, BAF45C, CERD4

Target/Specificity

This DPF3 antibody is generated from rabbits immunized with a KLH conjugated synthetic peptide between 143-171 amino acids from the Central region of human DPF3.

Dilution

WB~~1:1000

E~~Use at an assay dependent concentration.

Format

Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.

Storage

Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions

DPF3 Antibody (Center) is for research use only and not for use in diagnostic or therapeutic procedures.

DPF3 Antibody (Center) - Protein Information

Name DPF3

Synonyms BAF45C, CERD4

Function Belongs to the neuron-specific chromatin remodeling complex (nBAF complex). During neural development a switch from a stem/progenitor to a post-mitotic chromatin remodeling mechanism occurs as neurons exit the cell cycle and become committed to their adult state. The transition from proliferating neural stem/progenitor cells to post-mitotic neurons requires a switch in subunit composition of the npBAF and nBAF complexes. As neural progenitors exit mitosis and differentiate into neurons, npBAF complexes which contain ACTL6A/BAF53A and PHF10/BAF45A, are exchanged for homologous alternative ACTL6B/BAF53B and DPF1/BAF45B or DPF3/BAF45C subunits in neuron-specific complexes (nBAF). The npBAF complex is essential for the selfrenewal/proliferative capacity of the multipotent neural stem cells. The nBAF complex along with CREST plays a role regulating the activity of genes essential for dendrite growth (By similarity). Muscle-specific component of the BAF complex, a multiprotein complex involved in transcriptional activation and repression of select genes by chromatin remodeling (alteration of DNA-nucleosome topology). Specifically binds acetylated lysines on histone 3 and 4 (H3K14ac, H3K9ac, H4K5ac, H4K8ac, H4K12ac, H4K16ac). In the complex, it acts as a tissue-specific anchor between histone acetylations and methylations and chromatin remodeling. It thereby probably plays an essential role in heart and skeletal muscle development.

Cellular Location Nucleus.

DPF3 Antibody (Center) - Protocols

Provided below are standard protocols that you may find useful for product applications.

- Western Blot
- Blocking Peptides
- Dot Blot
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- Cell Culture

DPF3 Antibody (Center) - Images

DPF3 Antibody (Center)(Cat. #AP5430c) western blot analysis in ZR-75-1 cell line lysates (35ug/lane). This demonstrates the DPF3 antibody detected the DPF3 protein (arrow).
