

TIE1 Fc Human Recombinant

Item Number	rAP-1889
Synonyms	Tyrosine kinase with immunoglobulin-like and EGF-like domains 1, JTK14, TIE, TIE1.
Description	Soluble TIE-1 Human Recombinant fused with the Fc part of human IgG1 produced in baculovirus is a homodimeric, glycosylated, polypeptide containing 749 amino acids and having a total molecular mass of 250 kDa. Human TIE-1/Fc monomer has a calculated molecular mass of approximately 105 kDa. As a
Uniprot Accession Number	P35590
Amino Acid Sequence	
Source	Insect Cells.
Physical Appearance and Stability	Sterile Filtered White lyophilized (freeze-dried) powder. Lyophilized sTIE-1 although stable at room temperature for 3 weeks, should be stored desiccated below -18°C. Upon reconstitution TIE-1 should be stored at 4°C between 2-7 days and for future use below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.
Formulation and Purity	TIE-1 Fc Chimera was lyophilized from a concentrated (1mg/ml) sterile solution containing 20mM Tris, 0.5M NaCl, 10% Sucrose. Greater than 90.0% as determined by: (A) Analysis by RP-HPLC. (B) Analysis by SDS-PAGE.
Application	
Solubility	It is recommended to reconstitute the lyophilized TIE-1 Fc Chimera in sterile water not less than 100µg/ml, which can then be further diluted to other aqueous solutions.
Biological Activity	
Shipping Format and Condition	Lyophilized powder at room temperature.

Optimal dilutions should be determined by each laboratory for each application. The listed dilutions are for recommendation only and the final conditions should be optimized by the ender users! This product is sold for **Research Use Only**
