

Rabbit Anti-Mouse Fibrinogen IgG Fraction pAb

Catalog No.	CSI19760A CSI19760B	Quantity:	1.0 mg 10 mg
Description:	Fibrinogen (also called Factor I) is a 340 kDa glycoprotein synthesised in the liver by hepatocytes and megakaryocytes. Fibrinogen, the principal protein of vertebrate blood clotting is a hexamer containing two sets of three different chains (alpha-, beta-, and gamma-), linked to each other by disulfide bonds. The N-terminal sections of these three chains contain the cysteines that participate in the cross-linking of the chains.		
Concentration:	10.0 mg/mL		
Volume:	0.1 mL		
Host:	Rabbit		
Isotype:	IgG		
Source:	Rabbit Serum		
Formulation:	Frozen Liquid in 0.05 M Sodium Phosphate pH 6.6 + 0.1 M NaCl + 1 mM EDTA		
Purification:	Protein A purified		
Cross-Reactivity:	Rat Fibrinogen		
Applications:	ELISA, IHC, WB. The optimal concentration should be determined by the user for each specific application.		
Storage & Stability:	Store at -70°C.		

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
