

Rabbit anti-Human IL- 6 Polyclonal Antibody

Catalog No.: PS037

Quantity: 0.5 ml

Specificity

The antibodies react with human natural and recombinant IL-6 as assessed by ELISA. The antibodies inhibit the biological activity of human natural and recombinant IL-6 as determined with the B9 cell bio-assay. The antibodies cross-react with baboon natural IL-6.

Use

The antibodies are useful for inhibition of human and monkey IL-6 in bio-assays. Furthermore, the antibody is useful for staining of IL-6 in Western blots.

Instructions for use

Before use in biological assays, the product must be filter sterilized, and depending on the concentration to be used, dialyzed against culture medium to remove the sodium azide added. Dilutions have to be made according to the amount of IL-6 to be inactivated. For Western blots the material should be diluted 20 times.

Presentation

0.5 ml diluted serum with 0.05% sodium azide. It inhibits 10 µg IL-6 per ml.
