Recombinant Hepatitis C Virus NS5 Genotype 4 (aa 2212 -2313) GST

Catalog No.	CSI15742A CSI15742B CSI15742C	Quantity:	100 μg 0.5 mg 1.0 mg
Description:	 HCV is a small 50nm, enveloped, single-stranded, positive sense RNA virus in the family Flaviviridae. HCV has a high rate of replication with approximately one trillion particles produced each day in an infected individual. Due to lack of proofreading by the HCV RNA polymerase, the HCV has an exceptionally high mutation rate, a factor that may help it elude the host's immune response. Hepatitis C virus is classified into six genotypes (1-6) with several subtypes within each genotype. The preponderance and distribution of HCV genotypes varies globally. Genotype is clinically important in determining potential response to interferon-based therapy and the required duration of such therapy. Genotypes (2, 3, 5 and 6). The <i>E.coli</i> derived recombinant protein contains the HCV NS5 Genotype 4 immunodominant regions, amino acids 2212-2313. The protein is fused with GST tag at N-terminus. 		
Source:	E. coli		
Formulation:	1.5 M urea + 25 mM Tris-HCl ,pH-8 + 0.2% Triton-X and 50% Glycerol.		
Purity:	HCV NS5 Genotype-4 protein is >95% pure as determined by 10% PAGE (coomassie staining).		
Purification Method: Specific Activity:	HCV NS5 Genotype-4 protei Immunoreactive with sera of	was purified by proprietary chromatographic technique. ICV-infected individuals.	
Storage & Stability:	HCV NS5 Genotype-4 although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.		
Applications:	-	n is suitable for ELISA and	d Western blots, excellent antigen
NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
