

## Recombinant HIV-1 gp41

<b>Catalog No.</b>	CSI15804A CSI15804B CSI15804C	<b>Quantity:</b>	100 µg 0.5 mg 1.0 mg
<b>Alternate Names:</b>	Prehairpin fusion intermediate, PFI		
<b>Description:</b>	Recombinant HIV-1 gp41 Strain IIIB is a non-glycosylated 288 aa polypeptide chain comprising aa 466-753 fused to β-Galactosidase at the N- terminus.  HIV-1 gp41, also known as prehairpin fusion intermediate (PFI), plays a critical role in viral fusion and entry of HIV into CD4 <sup>+</sup> cells and represents a potential target for anti-viral therapeutics and vaccine development because of its function as a transient viral entry intermediate.		
<b>Source:</b>	<i>E. coli</i>		
<b>Molecular Weight:</b>	32 kDa (HIV-1 gp41) + 114 kDa (β-Galactosidase)		
<b>Formulation:</b>	Sterile filtered colorless clear solution containing 20 mM Tris HCl, pH 8.0, + 8 M urea + 10 mM β-mercaptoethanol.		
<b>Purity:</b>	>95.0% by SDS-PAGE.		
<b>Endotoxin Level:</b>	< 0.1 ng/µg of protein.		
<b>Specific Activity:</b>	Immunoreactive with all sera of HIV-I infected individuals.		
<b>Applications:</b>	ELISA, Western blot. HIV-1 gp41 prehairpin fusion intermediate is an excellent antigen for early detection of HIV seroconversion with minimal specificity problems.		
<b>Storage &amp; Stability:</b>	Stable for 1 month at room temperature. Store at -20°C. Stable for 5 years. For multiple use, aliquot upon arrival and freeze working solutions at -20°C. <b>Avoid repeated freeze-thaw cycles.</b>		

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
