

MONOCLONAL ANTIBODY

For research use only. Not for clinical diagnosis.

Catalog No. CTB-AT7-M01

Anti Atg7 (Clone: ATG7 · 2)

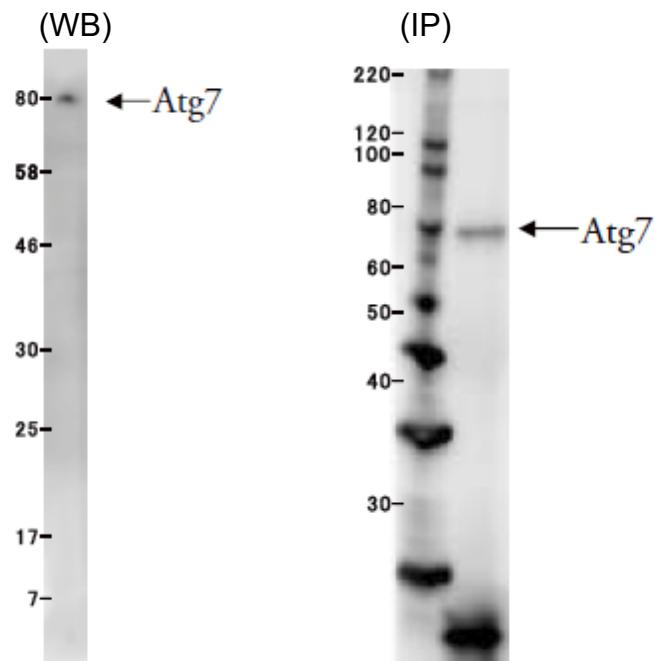

BACKGROUND

Autophagy is an evolutionaly conserved machinery, in which autophagosome fuses with lysosome and degrades bulk cytoplasmic contents¹⁾. Autophagy is involved in many physiological processes such as development, infection, cancer, and neurodegenerative diseases²⁾. ATG (autophagy-related) genes were identified by genetic screening in yeast³⁾. Atg7 acts as an E1-like enzyme in both Atg12 and Atg8 ubiquitin-like conjugation systems. Atg7 transfers Atg12 to an E2-like enzyme Atg10, and conjugates Atg12 to Atg5. In the other hand, Atg7 transfers Atg8 to another E2-like enzyme Atg3, and conjugates Atg8 to phosphatidylethanolamine⁴⁾. Many of these ATG genes are conserved also in mammals. Atg7 deficient neonates die soon after birth as they cannot endure perineonatal starvation⁵⁾. Conditional deletion of Atg7 in nerves system results in neurodegeneration with ubiquitin containing aggregates⁶⁾.

Product type	Primary Antibodies
Host	Mouse
Form	Liquid
	Protein G Purified
	PBS (pH7.4) with 1% BSA and less than 0.1% NaN ₃ as preservative
Volume	500 µl
Concentration	0.1 mg/ml
Genebank Info	AAH00091.1 (Homo sapiens)
Other Names	GSA7, APG7L, APG7-LIKE, DKFZp434N0735, ATG7
Antigen	Recombinant Human Atg7
Clone	ATG7 · 2
Cross reactivity	HU
Isotype	IgG2b

Application notes	Recommended dilution <ul style="list-style-type: none">• Western Blot: 1/10 - 1/500• Immunoprecipitation : 1/10 Optimum dilution rate should be determined by end user.
Storage	Store below -20°C (below -70°C for prolonged storage).
