

Product Information

Endotoxin Free Collection Tubes

CAT#: EA-001

Endotoxin is the lipopolysaccharide (LPS) complex located in the outer membrane of gram-negative bacteria. During experimental procedures, large amount of endotoxins are shed and can easily contaminate labware, buffers and downstream products. Presence of endotoxin in any of these has a detrimental effect on culturing of cells and can lead to generation of irreproducible or negative experimental data. Therefore, it is critical to keep endotoxin away from samples and products. Endotoxin-free Collection Tube, 2.0 ml are screw cap microcentrifuge tubes that are recommended for samples with special requirement of endotoxin level (< 0.05 EU/ml).

CAT#	PRODUCT	Package	Storage
EA-001	Endotoxin Free Collection Tubes	50 vials	RT

Product Information

Highlights	Endotoxin-free tubes that are strong enough for centrifugation up to 20,000 x g and suitable for use in vapor-phase liquid nitrogen storage, -80°C freezers, boiling, and autoclaving.
Storage	RT
Shipping Condition	RT
Usage	For Research Use Only! Not For Use in Humans.
