

Recombinant Chicken IL-15

Cat. No. IL15-20C **Lot. No.** (See product label)

SPECIFICATION

Product Overview	Chicken IL-15 was produced in yeast and therefore does not have endotoxin, is naturally folded, and post-translationally modified.
Description	Interleukin 15 (IL-15) is a cytokine with structural similarity to IL-2 that is secreted by mononuclear phagocytes (and some other cells) following infection by virus(es). This cytokine induces cell proliferation of natural killer cells; cells of the innate immune system whose principal role is to kill virally infected cells. IL-15 was discovered to be a member of a family of cytokines, which also includes IL-2, IL-4, IL-7, IL-9, and IL-21. The specific receptor for IL-15, IL-15 receptor alpha, appears to regulate IL-15 secretion, stability, and activity. All members of this family use the common gamma chain as part of their signaling complex. IL-15 has been shown to play a role in many diseases, including obesity, influenza, and inflammatory autoimmune diseases.
Source	Yeast
Species	Chicken
Form	Lyophilized
Molecular Mass	14.5 kDa
AA Sequence	NHCKWSDVLK DLELIKTED IDVSLYTANT YEDIECQEPV MRCFFLEMKV ILHECDIKKC SRKHDVRNIW KNGNARFATY QLNSTTAKKC KECEEYEEKN FTEFIQSFVK VIQRECKKYA N (121)

 Tel: 1-631-559-9269 1-516-512-3133

 Email: info@creative-biomart.com  Fax: 1-631-938-8127

 45-1 Ramsey Road, Shirley, NY 11967, USA

1/2

For Research Use Only

Applications	The chicken IL-15 protein can be used in cell culture, as an IL-15 ELISA Standard, and as a Western Blot Control.
Storage	-20 C
Tag	Non
