

Rhesus Monkey Vitreous Humor

Cat. No.: NHP-BF001

This product is for research use only and is not intended for diagnostic use.

In biological and medical research related to human and animal diseases, the Rhesus monkey is usually used because of its high closeness to humans. This vitreous humor product is collected from the eyes of Rhesus monkeys. The offered sample is in a cryopreserved or fresh state and can be a useful tool for understanding mediators of disease, including inflammatory molecules such as IL-6 and IL-8.

Detailed Product Description

Source	Healthy rhesus monkey
Purity	Free of foreign impurities.
Applications	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
Storage Conditions	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

Technical Specifications

Collection Method	Vitreous humor is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained vitreous humor does not contain other contamination and serves as a primary source for biomarkers.
Quality Control	Strict accordance with biomedical standards.
Available Formats	Frozen
