

Rhesus Monkey Bile

Cat. No.: NHP-BF010

This product is for research use only and is not intended for diagnostic use.

In biology and medicine research, the Rhesus monkey is commonly used because of its high similarity to humans. This product is sampled from Rhesus monkeys' liver tissue. The sample is high-quality and offered in a cryopreserved or fresh form and is usually used in a series of test and assay experiments such as PCR, WB, immunoprecipitation, and immunofluorescent flow cytometry.

Detailed Product Description

| | |
|---------------------------|--|
| Source | Healthy rhesus monkey |
| Purity | Free of foreign impurities. |
| Applications | Suitable for various research fields including biomarker research, pharmacology, and toxicology. |
| Storage Conditions | Store at -20 °C or -80 °C. Avoid freeze-thaw cycle. |

Technical Specifications

| | |
|--------------------------|---|
| Collection Method | Bile is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained through direct surgical cannulation, bile does not contain other contamination and serves as a primary source for biomarkers. |
| Quality Control | Strict accordance with biomedical standards. |
| Available Formats | Frozen |
