

## Rhesus Monkey Aqueous Humor

**Cat. No.: NHP-BF011**

**This product is for research use only and is not intended for diagnostic use.**

In biology and medicine research, particularly for those related to human and animal diseases, the Rhesus monkey is commonly used because of its high similarity to humans. The monkey's vitreous humor product is obtained from the eyes. The available sample is in a cryopreserved or fresh state and can be used as a helpful tool for a number of tests and assays.

### Detailed Product Description

<b>Source</b>	Healthy rhesus monkey
<b>Purity</b>	Free of foreign impurities.
<b>Applications</b>	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
<b>Storage Conditions</b>	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

### Technical Specifications

<b>Collection Method</b>	Aqueous humor is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained aqueous humor does not contain other contamination and serves as a primary source for biomarkers.
<b>Quality Control</b>	Strict accordance with biomedical standards.
<b>Available Formats</b>	Frozen
