

## Cynomolgus Monkey Amniotic Fluid

**Cat. No.: NHP-BF026**

**This product is for research use only and is not intended for diagnostic use.**

In scientific research, the Cynomolgus monkey is often used in neuroscience and disease-related experiments. This available product is collected from Cynomolgus monkeys' amniotic cavities. The sample is high-quality and offered in a cryopreserved or fresh form. It can be applied to a number of tests and assays, for example, PCR, WB, immunoprecipitation, and immunofluorescent flow cytometry.

### Detailed Product Description

<b>Source</b>	Healthy cynomolgus monkey
<b>Purity</b>	Free of foreign impurities.
<b>Applications</b>	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
<b>Storage Conditions</b>	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

### Technical Specifications

<b>Collection Method</b>	Amniotic fluid is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained through the ultrasound-guided collection, amniotic fluid serves as a primary source for biomarkers and stem cells.
<b>Quality Control</b>	Strict accordance with biomedical standards.
<b>Available Formats</b>	Frozen
