

## African Green Monkey Pericardial Fluid

**Cat. No.: NHP-BF050**

**This product is for research use only and is not intended for diagnostic use.**

African Green monkey has been considered as one of the most suitable NHP models for biomedical research which is highly close to Rhesus monkey. This available product is collected from african green monkeys' heart. The sample is high-quality and offered in a cryopreserved or fresh form. It can be applied to a number of tests and assays, for example, PCR, WB, immunoprecipitation, and immunofluorescent flow cytometry.

### Detailed Product Description

<b>Source</b>	Healthy African green monkey
<b>Purity</b>	Free of foreign impurities.
<b>Applications</b>	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
<b>Storage Conditions</b>	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

### Technical Specifications

<b>Collection Method</b>	Pericardial fluid is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained from the pericardium through a pericardiocentesis method, pericardial fluid does not contain other contamination and serves as a primary source for biomarkers.
<b>Quality Control</b>	Strict accordance with biomedical standards.
<b>Available Formats</b>	Frozen
