

African Green Monkey Feces

Cat. No.: NHP-BF051

This product is for research use only and is not intended for diagnostic use.

African Green monkey has been considered as one of the most suitable NHP models for biomedical research which is highly close to Rhesus monkey. The product is high-quality and collected from African green monkey. This available product is collected from African green monkeys. The sample is high-quality and offered in a cryopreserved or fresh form. It can be applied to a number of tests and assays, for example, PCR, WB, immunoprecipitation, and immunofluorescent flow cytometry.

Detailed Product Description

| | |
|---------------------------|--|
| Source | Healthy African green monkey |
| Purity | Free of foreign impurities. |
| Applications | Suitable for various research fields including biomarker research, pharmacology, and toxicology. |
| Storage Conditions | Store at -20 °C or -80 °C. Avoid freeze-thaw cycle. |

Technical Specifications

| | |
|--------------------------|---|
| Collection Method | Feces are collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained without any direct intervention, feces do not contain contamination with animal feeds and serve as a primary source for biomarkers. |
| Quality Control | Strict accordance with biomedical standards. |
| Available Formats | Frozen |
