

## African Green Monkey Bile

**Cat. No.: NHP-BF054**

**This product is for research use only and is not intended for diagnostic use.**

African Green monkey has been considered as one of the most suitable NHP models for biomedical research which is highly close to Rhesus monkey. This product is collected from African green monkeys' liver tissue. The sample is available as cryopreserved or fresh, and can be used for a variety of tests and assays such as PCR, Western blot, immunoprecipitation, immunofluorescent flow cytometry.

### Detailed Product Description

<b>Source</b>	Healthy African green monkey
<b>Purity</b>	Free of foreign impurities.
<b>Applications</b>	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
<b>Storage Conditions</b>	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

### Technical Specifications

<b>Collection Method</b>	Bile is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained through direct surgical cannulation, bile does not contain other contamination and serves as a primary source for biomarkers.
<b>Quality Control</b>	Strict accordance with biomedical standards.
<b>Available Formats</b>	Frozen
