

African Green Monkey Amniotic Fluid

Cat. No.: NHP-BF056

This product is for research use only and is not intended for diagnostic use.

African Green monkey has been considered as one of the most suitable NHP models for biomedical research which is highly close to Rhesus monkey. This available product is collected from african green monkeys' amniotic cavities. The sample is high-quality and offered in a cryopreserved or fresh form. It can be applied to a number of tests and assays, for example, PCR, WB, immunoprecipitation, and immunofluorescent flow cytometry.

Detailed Product Description

Source	Healthy African green monkey
Purity	Free of foreign impurities.
Applications	Suitable for various research fields including biomarker research, pharmacology, and toxicology.
Storage Conditions	Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.

Technical Specifications

Collection Method	Amniotic fluid is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained through the ultrasound-guided collection, amniotic fluid serves as a primary source for biomarkers and stem cells.
Quality Control	Strict accordance with biomedical standards.
Available Formats	Frozen
