

## African Green Monkey Serum

**Cat. No.: NHP-BP003**

**This product is for research use only and is not intended for diagnostic use.**

African Green monkey has been seen as one of the most suitable NHP models for scientific research because of it being highly close to the Rhesus monkey. The offered product is obtained from African Green monkeys. The sample is confirmed as high-quality and negative for Herpes B Virus, retroviruses, SIV, SRV, and STLTV. It can be applied to a lot of biochemical procedures such as PCR, WB, immunoprecipitation, immunofluorescent flow cytometry, and Biomarker Discovery.

### Detailed Product Description

|                           |  |
|---------------------------|--|
| <b>Source</b>             | Healthy African green monkey   |
| <b>Purity</b>             | No hemolysis or clotting.  |
| <b>Applications</b>       | Suitable for various research fields including biomarker research, pharmacology, and toxicology. |
| <b>Storage Conditions</b> | Store at -20 °C or -80 °C. Avoid freeze-thaw cycle.  |

### Technical Specifications

|                          |  |
|--------------------------|--|
| <b>Collection Method</b> | Serum is collected from rigorously screened healthy donors, and the collection process strictly adheres to animal welfare requirements. Obtained through centrifugation processing of non-anticoagulated whole blood, serum does not contain fibrinogen or other clotting factors and serves as a primary source for biomarkers. |
| <b>Quality Control</b>   | Strict accordance with biomedical standards.   |
| <b>Available Formats</b> | Frozen   |
