

Rhesus Monkey Epididymis

Cat. No.: NHP-TI079

This product is for research use only and is not intended for diagnostic use.

yes Creative Biolabs provides this tissue block isolated from Rhesus monkeys' epididymis. The sample has been excluded from multiple virus infections including Herpes-B Virus, as well as SRV, SIV, and STLV-1, and can be applied in a series of *in vitro* test and assay experiments such as PCR, WB, immunoprecipitation, immunofluorescent flow cytometry.

Detailed Product Description

Source Healthy rhesus monkey

Applications Given their robust resemblances to humans across physiological, behavioral, immunological, and genetic aspects, non-human primates serve as crucial models in a broad range of biomedical research, especially in bridging translational research from small animal models to humans. Creative Biolabs offers both standard formats and personalized non-human primate tissue preparations, catering to diverse *in vitro* testing applications.

System Reproductive System

Organ/Tissue Epididymis

Shipping Dry ice

Technical Specifications

Preservation Methods Snap frozen

Quality Assurance Tissue blocks are prepared by histologists with years of experience to be sure of excellent morphology and high quality.

Packaging Securely packaged to maintain the tissue quality during shipping.
