

## Rhesus Monkey Submaxillary

Cat. No.: NHP-TI106

**This product is for research use only and is not intended for diagnostic use.**

**yes** This tissue block from Creative Biolabs is isolated from Rhesus monkeys' submaxillary. The sample has been verified as negative for multiple types of virus infections including Herpes-B Virus, SRV, SIV, and STLV-1, and can serve as a beneficial tool in a number of *in vitro* test and assay experiments such as PCR, WB, immunoprecipitation, immunofluorescent flow cytometry.

### Detailed Product Description

<b>Source</b>	Healthy rhesus monkey
<b>Applications</b>	Given their robust resemblances to humans across physiological, behavioral, immunological, and genetic aspects, non-human primates serve as crucial models in a broad range of biomedical research, especially in bridging translational research from small animal models to humans. Creative Biolabs offers both standard formats and personalized non-human primate tissue preparations, catering to diverse <i>in vitro</i> testing applications.
<b>System</b>	Other
<b>Organ/Tissue</b>	Submaxillary
<b>Shipping</b>	Dry ice

### Technical Specifications

<b>Preservation Methods</b>	Snap frozen
<b>Quality Assurance</b>	Tissue blocks are prepared by histologists with years of experience to be sure of excellent morphology and high quality.
<b>Packaging</b>	Securely packaged to maintain the tissue quality during shipping.
