

HAV Polyclonal Antibody(VAnt-Wyb025)

PRODUCT INFORMATION

Product Overview

HAV (Strain HM175), Goat Polyclonal Antibody, reacts with all viral antigens, Purified.

SPECIFICATIONS

Target	Hepatitis A Virus
Type	Antibody
Applications	Used for ELISA.

INFORMATION

Introduction

The hepatitis A virus is a non-enveloped picornavirus. It contains a single-stranded RNA packaged in a protein shell. There are multiple genotypes of the virus, but only one serotype exists. Codon use within the genome is biased and unusually distinct from its host. It also has a poor internal ribosome entry site. In the region that codes for the HAV capsid, there are highly conserved clusters of rare codons that restrict antigenic variability.

Alternative Names	Hepatitis A virus; HAV; Hepatovirus; Picornaviridae
