

HIV Monoclonal Antibody (p24, IgG1, 9.71 mg/ML)(VAnt-Wyb164)

PRODUCT INFORMATION

Product Overview

HIV, Mouse Monoclonal Antibody, specific for Human Immunodeficiency Virus p24, Isotype: IgG1, 9.71 mg/ML.

SPECIFICATIONS

Target	Human Immunodeficiency Virus
Type	Antibody
Applications	Used for ELISA.

INFORMATION

Introduction

The human immunodeficiency virus (HIV) is a *lentivirus* (a subgroup of retrovirus) that causes HIV infection and over time acquired immunodeficiency syndrome (AIDS). HIV infect human which leads to paralysis of the immune system by destructing T lymphocytes, and then blocks processes of the cellular immune and humoral immune, eventually leads to AIDS. Recently, there are four HIV strains, named M, N, O and P type, all come from Cameroon chimpanzees and gorillas. Each of these four species has unique source, and we now know that the most widely spread of M and N have been confirmed from chimpanzees, while the rare O and P types have been confirmed from gorillas of southwestern Cameroon.

Alternative Names	Human immunodeficiency virus; HIV; AIDS; acquired immunodeficiency syndrome; HIV type 1; HIV-1; HIV type 2; HIV-2; HIV-1/HIV-6
