

## RSV Monoclonal Antibody (IgG2a, 5.8 mg/mL)(VAnt-Wyb485)

### PRODUCT INFORMATION

#### Product Overview

Respiratory syncytial virus, Mouse Monoclonal Antibody, specific for Respiratory syncytial virus (types A and B strain) fusion protein, Isotype: IgG2a, 5.8 mg/mL, > 90% pure.

### SPECIFICATIONS

Target	Respiratory Syncytial Virus
Type	Antibody
Applications	Used for indirect IFA, ELISA and Lateral Flow.

### INFORMATION

Introduction	Human respiratory syncytial virus (HRSV) belongs to <i>Paramyxoviridae</i> family. It is a syncytial virus that causes respiratory tract infections. RSV is an enveloped RNA virus with a non-segmented single-stranded negative-sense genome. The disease caused by RSV is called respiratory syncytial virus pneumonia, referred to as syncytial virus pneumonia. Syncytial virus pneumonia is a common interstitial pneumonia in children, often occurred in infants and young children. It is a major cause of lower respiratory tract infections and hospital visits during infancy and childhood.
Alternative Names	RS virus; RSV; Respiratory syncytial virus
