

## RSV Monoclonal Antibody (IgG1, 3.2 mg/mL)(VAnt-Wyb494)

### PRODUCT INFORMATION

#### Product Overview

Respiratory syncytial virus, Mouse Monoclonal Antibody, specific for Respiratory syncytial virus (types A and B strain) fusion protein, Isotype: IgG1, 3.2 mg/mL, > 95% pure.

### SPECIFICATIONS

|        |                             |
|--------|-----------------------------|
| Target | Respiratory Syncytial Virus |
|--------|-----------------------------|

|      |          |
|------|----------|
| Type | Antibody |

### INFORMATION

#### Introduction

Human respiratory syncytial virus (HRSV) belongs to *Paramyxoviridae* family. It is a syncytial virus that causes respiratory tract infections. RSV is an enveloped RNA virus with a non-segmented single-stranded negative-sense genome. The disease caused by RSV is called respiratory syncytial virus pneumonia, referred to as syncytial virus pneumonia. Syncytial virus pneumonia is a common interstitial pneumonia in children, often occurred in infants and young children. It is a major cause of lower respiratory tract infections and hospital visits during infancy and childhood.
