

***Clostridium* Monoclonal Antibody (IgM)(VAnt-Wyb577)**

PRODUCT INFORMATION

Product Overview

Clostridium botulinum, Mouse Monoclonal Antibody (Clone: B364M), specific for *Clostridium botulinum* Toxin A (aa 1280-1292), Isotype: IgM.

SPECIFICATIONS

Target	<i>Clostridium</i>
Type	Antibody
Applications	Used for ELISA, IFA and RIA.

INFORMATION

Introduction	<i>Clostridium</i> is a genus of Gram-positive bacteria, which contains around 100 species including common free-living bacteria, as well as important pathogens. <i>Clostridium</i> endospores have a distinct bowling pin or bottle shape, distinguishing them from other bacterial endospores, which are usually ovoid in shape. <i>Clostridium</i> species inhabit soils and the intestinal tract of animals, including humans. In general, the treatment of clostridial infection is high-dose penicillin G, to which the organism has remained susceptible.
Alternative Names	C. botulinum
