Notch ligands. DLL1 is expressed by thymic and splenic stromal cells, macrophages, and dendritic cells. The Notch pathway is an important intercellular signaling pathway that plays a major role in controlling cell fate. The HMD1-5 antibody has been shown to neutralize DLL1 in

vivo.

BACKGROUND

Introduction	DLL1 is a human homolog of the Notch Delta ligand and is a member of the delta/serrate/jagged family. It plays a role in mediating cell fate decisions during hematopoiesis. It may play a role in cell-to-cell communication. [provided by RefSeq, Jul 2008]
