Lot. No. (See product label)

PRODUCT INFORMATION

Product Overview	Rabbit Anti-NFKB1 Polyclonal Antibody
Antigen Description	NF-kappa-B is a pleiotropic transcription factor which is present in almost all cell types and is involved in many biological processes such as inflammation, immunity, differentiation, cell growth, tumorigenesis and apoptosis. NF-kappa-B is a homo- or heterodimeric complex formed by the Rel-like domain-containing proteins RELA/p65, RELB, NFKB1/p105, NFKB1/p50, REL and NFKB2/p52. The dimers bind at kappa-B sites in the DNA of their target genes and the individual dimers have distinct preferences for different kappa-B sites that they can bind with distinguishable affinity and specificity. Different dimer combinations act as transcriptional activators or repressors, respectively.
specificity	The antibody detects endogenous level of total NFκB-p105/p50 protein.
Target	NFKB1
Immunogen	Peptide sequence around aa. 930~934 (E-T-S-F-R) derived from Human NFκB-p105.
