

Recombinant IBV (B/Victoria/705/2018) Hemagglutinin [His] (DAG-H10710)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Product Overview	A DNA sequence encoding the Influenza B (B/Victoria/705/2018) Hemagglutinin (Met1-Ile546) was expressed with a polyhistidine tag at the C-terminus
Purity	> 95% as determined by SDS-PAGE
Conjugate	His
Applications	Immunoassays
Molecular Weight	58.9 kDa
Format	Lyophilized
Size	100 µg
Buffer	Lyophilized from sterile 20mM Tris, 500mM NaCl, 10%glycerol, pH8.0
Storage	Store at -20°C to -80°C
Ship	Wet ice

BACKGROUND

Introduction	The Influenza B virus is an enveloped member of the Orthomyxoviridae family. Influenza B, along with Influenza A, is responsible for the respiratory illness influenza (flu). Influenza B differs from influenza A in that influenza B only infects humans and seals, while influenza A infects a wide range of animals, including birds and pigs. This increased host range allows influenza A to mutate about 2-3 times faster than influenza B.
