

## Fluoroketamine [BSA] (DAG-WT1863)

This product is for research use only and is not intended for diagnostic use.

### PRODUCT INFORMATION

Conjugate	BSA
Applications	ELISA, LFIA,
Format	Liquid
Size	1 mg
Buffer	10mM PBS, pH 7.4
Preservative	None
Storage	Store at -20°C
Ship	Wet ice

### BACKGROUND

Introduction	Fluoroketamine, also known as 2-fluoro-2-deoxyketamine (2-F2DK), is a semi-synthetic dissociative anesthetic and analgesic drug that is chemically related to ketamine. It is a potent opioid-sparing anesthetic that has gained popularity in recent years, particularly in veterinary medicine. It is typically administered via intravenous (IV) injection for pain management and anesthesia, and its effects can last up to 8 hours.
Keywords	Fluoroketamine; 2-fluoro-2-deoxyketamine; 2-F2DK
