

Ethametsulfuron [BSA] (DAG-WT1867B)

This product is for research use only and is not intended for diagnostic use.

PRODUCT INFORMATION

Conjugate	BSA
Applications	ELISA, LFIA,
Format	Liquid
Size	1 mg
Buffer	10mM PBS, pH 7.4
Preservative	None
Storage	Store at -20°C
Ship	Wet ice

BACKGROUND

Introduction	Ethametsulfuron is a herbicide used to control the growth of broadleaf plants. It belongs to the phenoxyacetic acid family of pesticides and is commonly used in agriculture and forestry. The chemical works by inhibiting the production of plant growth hormones, leading to a reduction in cell growth and eventual plant death. Ethametsulfuron is generally effective against dicotyledonous plants, but its effectiveness may vary depending on the specific plant species and environmental conditions. It is important to follow all instructions and safety precautions when using ethametsulfuron, as exposure to the chemical can be harmful.
Keywords	Ethametsulfuron; Ethametsulfuron-methyl
