

Recombinant Influenza A Virus H8N4 HA1, His-tagged

DAG1769 H8N4

Lot. No. (See product label)

PRODUCT INFORMATION

Product overview	HA1 (H8N4) (Influenza A) (ABB87729, 16 a.a. - 343 a.a.) partial recombinant protein with His tag expressed in 293 cells.
Source	293 cells
Species	H8N4
Tag	His
Form	Liquid
Applications	SDS-PAGE

PACKAGING

Storage	Store at 4°C. Do not freeze. Stable for 1 year from the date of shipment.
Concentration	1 ug/uL
Buffer	In PBS

BACKGROUND

Introduction	H8N4 is a subtype of the species Influenza A virus. Influenza (flu) is a respiratory infection in mammals and birds. It is caused by an RNA virus in the family Orthomyxoviridae. The virus is divided into three main types (Influenza A, Influenza B, and Influenza C), which are distinguished by differences in two major internal proteins (hemagglutinin (HA) and neuraminidase (NA)). Influenza A is further divided into subtypes based on differences in the membrane proteins hemagglutinin (HA) and neuraminidase (NA), which are the most important targets for the immune system. The notation HhNn is used to refer to the subtype comprising the hth discovered Hemagglutinin (HA) protein and the nth discovered neuraminidase (NA) protein.
Keywords	Influenza A virus subtype H8N4; H8N4
